

Minutes of Meeting with Client held on 30/07/2026

Present: Client (Emma), Eli, Alisha, Matthew, Bryant, Mohammad

Apologies: Petr

Absent: None

Meeting Started: (3:15pm 30/07/2026)

Discussion	ACTION
1.1 Project Background The client explained that the project supports Business School research into measuring mental load. The application will be used alongside Qualtrics surveys and should focus primarily on usability rather than research functionality. - Measure mental load through survey responses. - Qualtrics will be used to collect survey data. - Users complete a survey and automatically receive a personalised report. - The report should be generated immediately after survey completion.	ALL
1.2 Data Storage and Privacy The team discussed how survey data should be stored and managed. - Survey responses should be stored through Qualtrics. - The client requires access to collected survey data for research purposes. - Generated reports do not need to be stored by the application. - Users may save their own reports if desired. - Survey responses should remain anonymous. - No login should be required. - User identities should not be linked to survey data. - Users should only be able to access their own report.	ALL
1.3 Survey Requirements The client clarified several requirements regarding survey structure and usage. - The survey is intended as a one-off activity. - Progress tracking over time is not required. - Approximately 27 survey questions will be included. - Survey layout has not yet been decided. - The preferred method of displaying questions will be discussed in a future meeting.	ALL

Discussion	ACTION
1.4 Security and Participation The team raised concerns regarding invalid survey submissions and participant access. - No user accounts are required. - The team proposed using a one-time access code similar to a Kahoot room code. - The client agreed that this approach should be investigated further. - A Participant Information Form should be displayed before survey commencement.	ALL
1.5 User Interface and Reporting The client discussed desired report functionality and lessons learned from previous project teams. - Interactive graphs should be considered. - Hover functionality may improve report interpretation. - Ease of use should be prioritised. - Previous solutions required file downloads and were not user friendly. - The application should be accessible through a simple web interface.	ALL
1.6 Other Requirements The team sought clarification on additional project requirements. - AI tools may be used during development. - No design preferences have been established at this stage. - Design requirements will be revisited in future meetings. - The client will primarily distribute survey access through workshop QR codes.	ALL

Meeting Closed: 4:45pm
